

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	MOUNTAINS COMMUNITY HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106361266
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	09/30/2025
Last Updated:	09/17/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.mchcares.com

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

9431

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	8966	9431	95.1
Spanish Language	446	9431	4.7
Asian Pacific Islander Languages	suppressed	9431	suppressed
Middle Eastern Languages	suppressed	9431	suppressed
American Sign Language		9431	
Other Languages	suppressed	9431	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

N

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

N

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

N

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

N

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

NA

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

NA

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

NA

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity				
Housing Instability				
Transportation Problems				
Utility Difficulties				
Interpersonal Safety				

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

30

Total number of respondents to HCAHPS Question 19

33

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

90.9

Total number of people surveyed on HCAHPS Question 19

174

Response rate, or the percentage of people who responded to HCAHPS Question 19

19

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual

Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

30

Total number of respondents to HCAHPS Question 17

33

Percentage of respondents who responded "yes" to HCAHPS Question 17

90.9

Total number of people surveyed on HCAHPS Question 17

174

Response rate, or the percentage of people who responded to HCAHPS Question 17

19

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Not disclosed			

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

17

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

153

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

11.1

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
----------	-----------------	----------------------	---------------------	-----------------	----------------	------------

Plan to address disparities identified in the data

Health Equity Plan: A Proactive Approach for Our Community

1. Our Commitment to Health Equity

As a Critical Access Hospital, Mountains Community Hospital's strength lies in our direct, personal connection to our community. Our mission is to be a trusted provider of exceptional care for every neighbor who depends on us. We recognize that while we may not have identified major disparities in our data, this is often due to the small size of our patient population, which makes it difficult to achieve statistical significance. This plan outlines a proactive and preventative strategy to identify and address potential inequities, making a firm commitment that every person in our community receives the highest quality of care, regardless of their background, beliefs, or circumstances. We will leverage our unique position as a community anchor to ensure our care is truly equitable.

2. Guiding Principles

This plan is built upon a foundation of core principles tailored for a small, community-focused environment.

Relationship-Driven: We will rely on direct conversations and trust-based relationships with our patients and community members as our primary method for understanding and addressing their needs.

Data-Informed: We will leverage simple, practical methods to collect and review data, using it as a guide to inform our decisions, not as a replacement for personal interaction.

Integrated Effort: Health equity will be a shared responsibility. We will integrate this work into existing roles and daily workflows, rather than creating new, resource-intensive processes.

Transparency and Trust: We will communicate our progress openly with our staff and community, building on the trust that already exists.

3. Strategic Focus Areas

This plan is structured around three key, practical pillars.

Pillar 1: Understanding Our Community Through Data

We will use our existing data and simple, direct methods to understand our patient population and identify potential barriers to care.

Objective: Optimize our use of existing demographic and social determinants of health (SDOH) data to better understand our patient population.

Initiative: We will conduct a comprehensive review of our current patient registration and nursing admission processes to ensure we are capturing and standardizing all necessary demographic and SDOH information. We currently screen all admitted patients for language preference, cultural and spiritual values, hearing and vision difficulties, social determinants of health, depression, and suicide risk. The goal is to make this data readily accessible for analysis.

Objective: Use this data to create a clearer picture of our community's health.

Initiative: We will create a simple, annual Health Equity Scorecard. This manual report will compare patient outcomes across different demographic groups to highlight areas for discussion and potential improvement, even with small data sets.

Pillar 2: Cultural Competency & Staff Education

A compassionate and culturally competent staff is our most valuable resource for providing equitable care.

Objective: Ensure all staff are equipped to address language and communication barriers.

Initiative: We will conduct an annual audit of our language services to identify any gaps. We will train all patient-facing staff on when and how to access interpreter services.

Pillar 3: Community Partnerships & Patient Voices

Our relationships are our greatest asset. This pillar focuses on leveraging those connections to drive change.

Objective: Establish a formal mechanism for gathering patient and community feedback on

health equity.

Initiative: We will form a small Patient and Community Feedback Group composed of a diverse group of local residents. The group will meet semi-annually to discuss the care we provide and share insights on community needs.

4. Action Plan

Quarter 1, 2026: Foundation & Task Force

Form a small, cross-functional Health Equity Task Force to oversee the plan.

Following comprehensive review of patient registration and nursing admission forms, finalize and implement updates, if indicated.

Quarter 2, 2026: Data & Education

Develop and present the first annual Health Equity Scorecard.

Quarter 3, 2026: Community Engagement

Launch Patient and Community Feedback Group and hold the first semi-annual meeting

Quarter 4, 2026: Resource & Review

Complete annual audit of language services and conduct staff training, if indicated.

Review all first-year initiatives to plan for the following year.

By focusing on these deliberate, manageable steps, we will build a stronger, more equitable foundation for our hospital and the community we are privileged to serve.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Mountains Community Hospital's performance in this area is demonstrated by our commitment to building a proactive system that incorporates patient voices, needs, and preferences.

Understanding the Patient Holistically: We have a foundational practice of screening all admitted patients for a comprehensive range of needs, including language preference, cultural and spiritual values, hearing and vision difficulties, social determinants of health, depression, and suicide risk. This allows us to provide care that is responsive to each patient's specific life circumstances. We also offer financial assistance and culturally tailored care to ensure equity and dignity in treatment.

Elevating the Patient's Voice: Our health equity plan commits to launching a Patient and Community Feedback Group. This initiative will formalize a mechanism for active patient and community engagement, ensuring their perspectives are central to our decision-making.

Ensuring Culturally Competent Care: We continually work to remove communication barriers and ensure a respectful experience. Our staff are trained to utilize our interpreter services vendor. We saw a 110% increase in total interpreter calls from 2023 to 2024, with Spanish being the most requested service, followed by Armenian, Russian, and American Sign Language. This growth demonstrates our increased effort to meet diverse patient needs. In Quarter 4, we will conduct our annual audit of our language services to identify any gaps and provide additional staff training, if indicated.

Patient safety

Mountains Community Hospital's performance in patient safety is demonstrated by our proactive, data-driven approach, which is a core component of our health equity strategy. We have a track record of strong safety outcomes, with a very low rate of healthcare-acquired infections. In fact, our last reportable infection occurred in 2022, and we have not had a reportable healthcare-acquired pressure injury for more than three years. Our adverse drug event (ADE) rates are also consistently below national benchmarks for critical access hospitals.

We adhere to Centers for Disease Control and Prevention (CDC) safety protocols and participate in quality and safety reporting programs, such as those tracked by the Centers for Medicare and Medicaid Services (CMS). All patient safety events are thoroughly investigated to determine root cause(s), and we include a review of demographic information as part of this process. Ongoing staff training in infection control, fall prevention, and medication safety, along with the use of our electronic health records, helps to reduce errors and patient safety events.

Our future performance will be further enhanced by our proactive equity plan. A central initiative is the creation of a simple Health Equity Scorecard. This report will allow us to compare patient safety outcomes across different demographic groups to identify any subtle disparities that might be missed in aggregate data due to our small patient population.

Addressing patient social drivers of health

Mountains Community Hospital's performance in addressing social determinants of health (SDOH) is a key part of our Equity Plan. We have a foundational practice of screening every patient who is admitted to the hospital and a system in place to provide resources and coordinate care.

Laying the Foundation: We have a foundational practice of screening all admitted patients for health-related social needs, including inadequate housing, housing instability, food insecurity, transportation insecurity, utilities insecurity, and problems with their primary support group. In 2026, we will review and implement any necessary updates to our patient admission forms to standardize this data collection, which is a crucial step to understanding and identifying social and economic barriers to care.

Providing Resources: We have a tangible system in place to provide resources. We provide eligibility services to assist patients with financial and insurance needs and offer charity care services. The nursing admission assessment form in our electronic medical record prompts nurses to use the FindHelp website when social needs are identified.

Our Case Manager and Social Work Manager work closely with patients with identified equity concerns to provide resources, ensuring a safe discharge into the community. Our telehealth services address transportation barriers for some patients in our rural area.

Effective treatment

Mountains Community Hospital's performance in the priority area of effective treatment is demonstrated by our commitment to evidence-based care and continuous quality improvement. For example, we follow a standard approach to screening and treating potential sepsis patients, knowing that compliance with the Surviving Sepsis Campaign's sepsis bundle guidelines significantly improves patient outcomes.

We have a proven record of success in this area. In 2024, our average compliance with the sepsis bundle was 75%. After standardizing our sepsis screening protocol and order sets in early 2025, we saw a dramatic improvement, with bundle adherence reaching 93% in the first half of the year. We have also had no patient readmissions for surgical site infections, which speaks to our strong adherence to surgical safety guidelines. We regularly monitor treatment outcomes through quality

reporting systems and make improvements when indicated.

Beyond these metrics, our performance is being addressed through a deliberate, long-term plan to ensure equitable care for all patients. We have rolled out a Patient Journey folder that includes educational materials to support adherence to the patient's treatment plan and improve management of their condition(s). The Patient Journey folders contain information written at a low health literacy level to ensure it is accessible to all patients. We will also use a simple Health Equity Scorecard to annually identify any subtle disparities in treatment effectiveness across different demographic groups.

Care coordination

As a Critical Access Hospital, Mountains Community Hospital has a highly personalized and effective approach to care coordination, with an average of less than one inpatient discharge per day. Our process ensures a seamless transition for every patient, leveraging a multi-disciplinary approach from the first day of admission.

Our dedicated Case Manager is involved from day one, working closely with nursing and social work to coordinate care based on the patient's in-hospital needs and projected post-discharge requirements. Daily multi-disciplinary rounds on the inpatient unit ensure that every team member, along with the patient, provides input on the care plan.

Beyond the walls of our hospital, we are proactively addressing challenges to care coordination. Given our rural location and limited community resources, we became concerned about patients leaving the hospital against medical advice (AMA), as this is a strong predictor of missed follow-up appointments. In response, we closely collaborate with our Medi-Cal provider, Inland Empire Health Plan (IEHP), to investigate the underlying reasons for this trend. Together, we are proposing solutions to remove systemic barriers, such as increasing access to transportation and developing targeted support for those with mental health or substance use disorders. This collaboration is a key performance measure, demonstrating our commitment to ensuring effective and equitable care coordination for our entire patient population.

Access to care

Mountains Community Hospital's performance in the priority area of access to care is focused on addressing the unique challenges of our rural community. We have taken proactive steps to remove transportation barriers and provide convenient, high-quality care.

We have ongoing collaboration with our area's Medi-Cal provider, Inland Empire Health Plan (IEHP), to identify solutions to ensure patients can make it to their appointments at our rural health clinic. This partnership demonstrates our commitment to working with external stakeholders to address systemic barriers to care.

Furthermore, we continue to enhance access through our telemedicine services. We transitioned to a new provider for behavioral health services in 2025, which has been met with positive feedback from our patients. This service is a crucial component of our strategy, as it ensures that patients in our rural area have consistent and convenient access to the care they need.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
